EDUCATION

All India Shri Shivaji Memorial Institute of Information Technology

Pune

B.Tech in Computer Science | CGPA: 9.19

2023 – 2027

EXPERIENCE

Frontend Engineer Intern

Oct 2025 – Mar 2026

Voxket AI

Remote

- Developed and maintained production-ready frontend components using Next.js, React.js, Tailwind CSS, and TypeScript.
- Published an npm package as part of the product ecosystem, contributing reusable functionality integrated into enterprise-facing workflows.
- Integrated frontend applications with backend APIs to support reliable data flow and feature delivery.
- Collaborated with cross-functional teams to build scalable features and improve application maintainability.

PROJECTS

Exchange Platform | *TypeScript, Node.js, WebSockets, PostgreSQL, Redis, Microservices*

- Built a cryptocurrency exchange backend supporting order placement, balance locking, trade execution, and real-time market updates.
- Designed a microservices architecture consisting of API, matching engine, database processor, and WebSocket services communicating through Redis.
- Implemented a custom price-time priority matching engine supporting partial fills, order cancellation, and market depth generation.
- Used Redis Pub/Sub and queues for low-latency event distribution and PostgreSQL for durable trade and balance persistence.
- Implemented real-time orderbook and trade streaming using WebSockets for market-wide and user-specific updates.
- GitHub Repository

Distributed Token Bucket Rate Limiter | *TypeScript, Node.js, Redis, Lua, Express*

- Built and published a distributed Token Bucket rate limiting library for Node.js using TypeScript, Redis, and Lua.
- Implemented atomic Redis Lua scripting to ensure race-condition-free rate limiting across multiple application instances.
- Developed configurable Express middleware supporting per-client quotas, automatic token refilling, and standard rate-limit headers.
- Stress-tested using Autocannon, sustaining ~3,000 requests/sec while maintaining correct behavior under concurrent load.
- GitHub Repository

Blockchain Evaluation Platform | *Next.js, Solidity, Foundry*

- Developed a blockchain-based academic evaluation platform for secure storage and verification of academic records.
- Implemented decentralized verification workflows to ensure record integrity and transparency.
- Built responsive user interfaces and authentication flows using Next.js.
- GitHub Repository
- Live Demo

TECHNICAL SKILLS

Languages: C++, Python, JavaScript, TypeScript, Solidity, HTML5, CSS3

Frontend: React.js, Next.js, Tailwind CSS, Responsive UI Development, State Management

Backend: Node.js, Express.js, REST APIs, Authentication, Authorization, Microservices

Databases: PostgreSQL, MongoDB, Database Design, Query Optimization

Tools & Technologies: Git, GitHub, Docker, Postman, VS Code, Foundry, Redis, WebSockets, CI/CD Concepts, Cloud Deployment
